

Appendix 5.1 Java Collections Framework Overview

All the following diagrams were taken from Liang, Y.D., *Introduction to Java Programming* (2009), 7th Edn., Pearson Education.

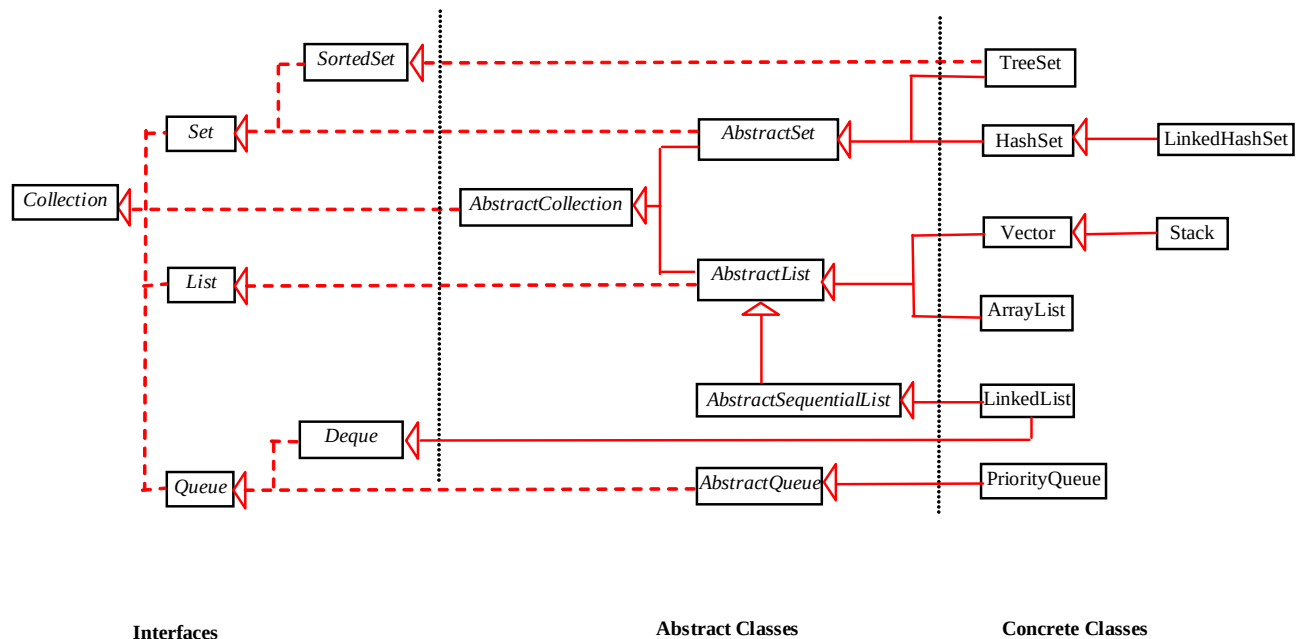

Figure 22.1(p. 752). A collection is a container that stores objects

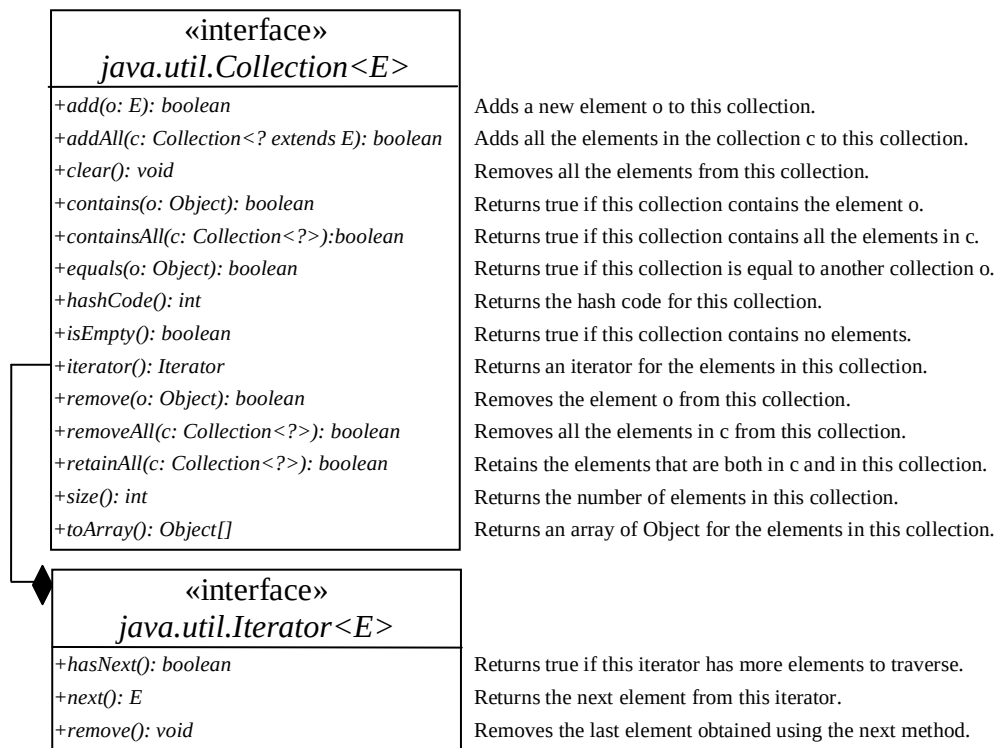

Figure 22.2(p. 753). The **Collection** interface is the root interface for manipulating a collection of objects. It contains the methods for manipulating the elements in a collection.

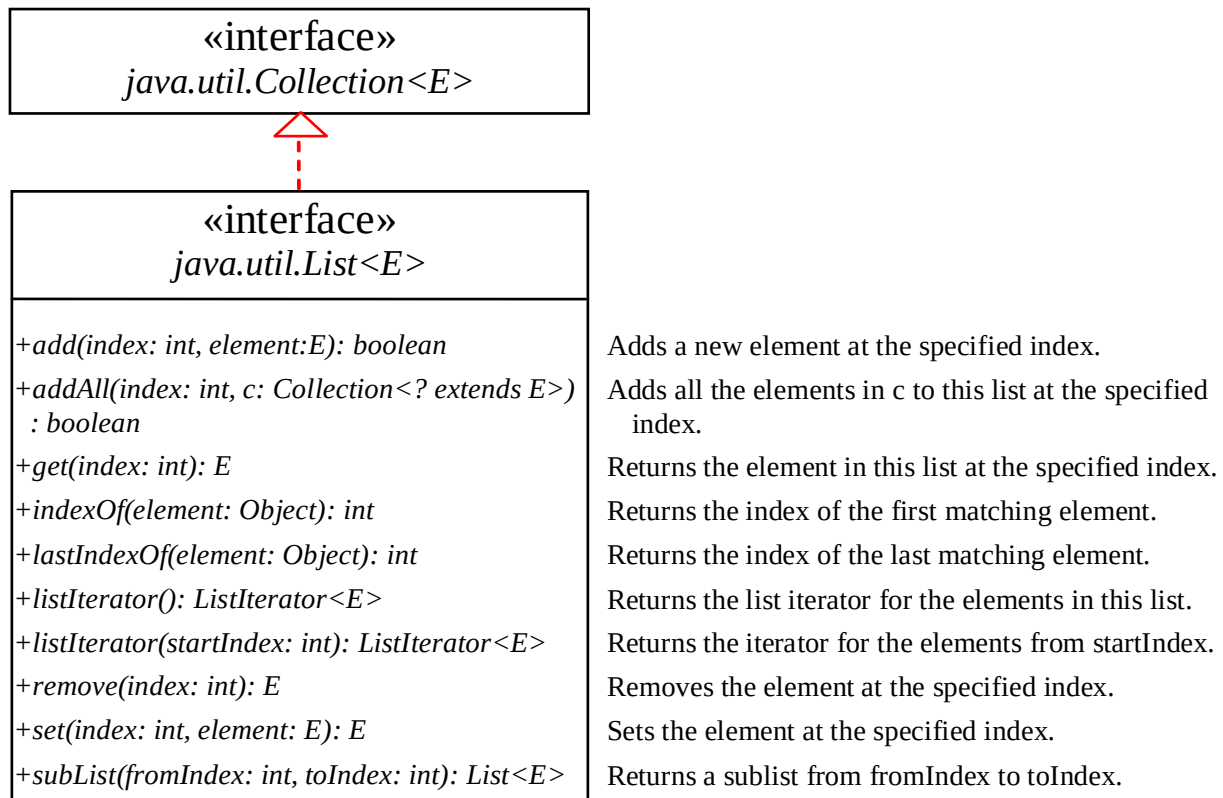

Figure 22.4(p. 763). The **List** interface stores elements according to position, permitting duplicates.

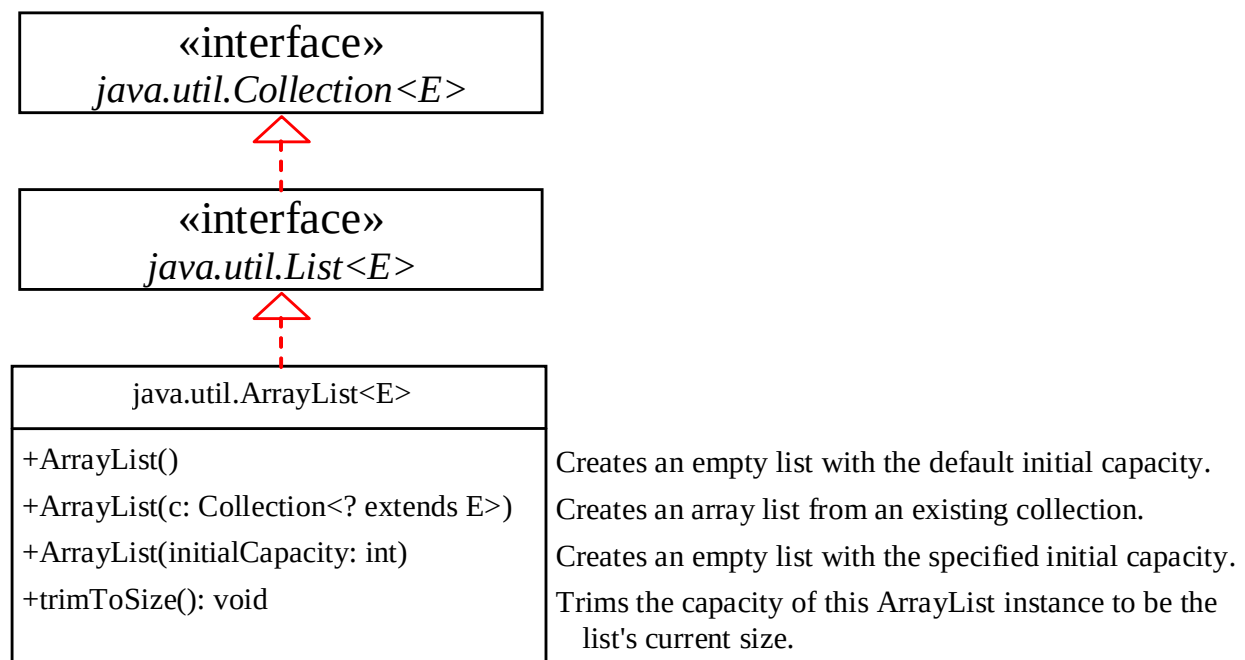

Figure 22.6(p. 764). **ArrayList** implements **List** using an array.

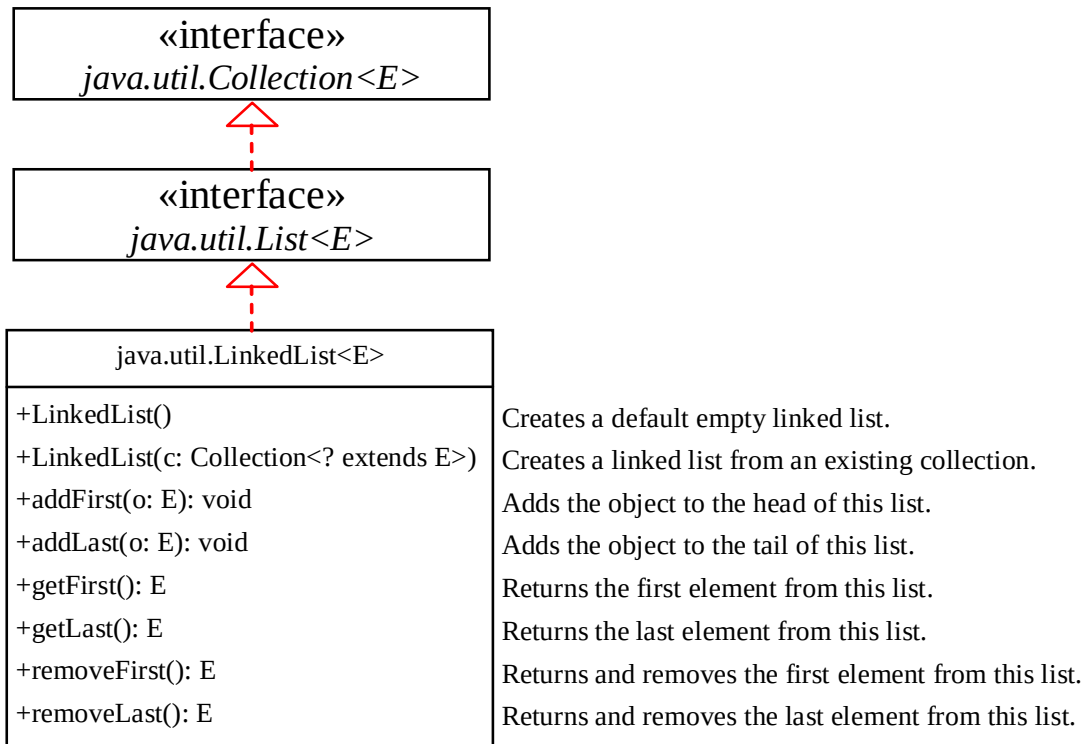

Figure 22.7(p. 767). **LinkedList** implements **List** using a linked list. It provides methods for adding and inserting elements at both ends of the list.
